

MathPivot & MathAthlone Strategic Plans

1. MathPivot: Customer Acquisition Strategy

Goal: Acquire a minimum of 30 paying customers (multiples of 5-6 per plan) for MathPivot.

Product & Pricing Context

MathPivot is positioned as an "Academic Performance System" for math, applying the athletic training model to academics (named coaches, structured mastery, competitions).

- **Foundation:** \$349/month (2x/week, Grades 5-8)
- **Acceleration:** \$549/month (3x/week, Grades 6-10)
- **Elite:** \$799/month (4x/week, Grades 7-12)
- **Summer Clinics:** \$249 - \$549 per session

Strategy to Acquire 30+ Customers

Phase 1: High-Intent Local & Digital Targeting

1. **Target Audience:** Affluent parents of middle and high school students (Grades 5-10) who value structured extracurriculars (e.g., travel sports, elite music programs) and are dissatisfied with traditional hourly tutoring.
2. **Channel:** Meta Ads (Facebook/Instagram) & Google Search Ads.
 - *Google Ads:* Target high-intent keywords like "AMC 8 prep", "middle school math coach", "structured math tutoring".
 - *Meta Ads:* Target parents in high-income zip codes with messaging contrasting "rotating hourly tutors" vs. "named academic coaches."

Phase 2: The "Summer Clinic" Funnel (Low Friction Entry)

1. **Offer:** Promote the Summer Math Clinics (\$249-\$549) as a low-commitment trial.
2. **Conversion Mechanism:** Parents enroll for the summer clinic. Upon completion, the clinic cost is credited toward a year-round coaching subscription (Foundation, Acceleration, or Elite). This significantly lowers the barrier to entry for the \$349-\$799/mo plans.

Phase 3: B2B Partnerships & Feeder Networks

1. **Local STEM Clubs & Private Schools:** Partner with local PTAs, robotics clubs, and chess clubs to offer exclusive webinars on "Building a Math Competition Portfolio."
2. **Referral Program:** Offer current/early families a \$100 credit for every successful referral that signs a 3-month minimum contract.

Target Breakdown (30 Customers)

- **Foundation (\$349/mo):** 15 customers (Focus on Grade 5-8 parents needing structured help)
 - **Acceleration (\$549/mo):** 10 customers (Focus on Grade 6-10 parents aiming for Mathathlon/AMC 8)
 - **Elite (\$799/mo):** 5 customers (Focus on highly competitive Grade 7-12 students aiming for AMC 10/12/AIME)
-

2. MathAthlone: Development Plan

Goal: Continue and scale the development of MathAthlone, the real-time math competition platform.

Current State Assessment

MathAthlone is currently a web application (hosted on Vercel) that gamifies math practice. It features live heats, ELO ratings, league brackets, and a tiered integrity system. The pricing model includes a Free tier, Pro (\$59/year), School (\$4/mathlete/yr), and District (\$2.50/mathlete/yr).

Development Roadmap

Phase 1: Core Platform Stabilization & Scale

1. **Database & Backend Scaling:** Ensure the backend (likely Node.js/Python with PostgreSQL/MongoDB) can handle real-time concurrency for "Live Heats." Implement WebSockets (e.g., Socket.io or Pusher) for real-time scoring and leaderboards.
2. **Procedural Question Generation:** Expand the 54 procedural generators to cover all 699 concepts. Ensure robust unit testing so generated questions are accurate and edge cases (e.g., negative square roots where not applicable) are handled.

Phase 2: Educator & Admin Tooling

1. **Teacher Dashboard:** Enhance the gap analysis tools. Map student performance directly to specific NC/Common Core standards with visual heatmaps.

2. **Integrity Features:** Develop the "Focus Mode" and "Lockdown Browser" integrations for high-stakes District/National competitions. This may require building a lightweight desktop client (Electron) or integrating with existing lockdown APIs.

Phase 3: League & Tournament Mechanics

1. **ELO & Matchmaking:** Refine the Glicko-2 rating system. Implement anti-smurfing and boosting detection algorithms.
2. **Bracket Generation:** Automate the creation of Swiss, round-robin, and elimination brackets for school and district-level tournaments.

Phase 4: Integration & Expansion

1. **SSO Integration:** Implement Clever, ClassLink, and Google Workspace SSO to reduce friction for school district onboarding.
2. **MathPivot Integration:** Build API hooks so MathAthlone can serve as the competition engine for MathPivot's "Acceleration" and "Elite" students, creating a seamless ecosystem between the two products.
